

Python?

Python, I deo

- ▶ programski jezik
- ▶ Wikipedia:
 - ▶ "Python is a general-purpose, high-level programming language whose design philosophy emphasizes code readability. Python claims to "[combine] remarkable power with very clear syntax", and its standard library is large and comprehensive. Its use of indentation for block delimiters is unique among popular programming languages."
 - ▶ "The reference implementation of Python (CPython) is free and open source software and has a community-based development model, as do all or nearly all of its alternative implementations. CPython is managed by the non-profit Python Software Foundation."

Python??

- ▶ interpreter, scripting language
- ▶ po tome nalik na BASIC (nekada), Octave, ...
- ▶ nema kompilacije i linkovanja, vrlo brze probe
- ▶ sporije od C-a
- ▶ ali se dobro povezuje sa C-om
- ▶ jako moćne i raznovrsne biblioteke (pySerial, numpy, matplotlib, sympy, ...)
- ▶ jednostavna sintaksa
- ▶ opšta namena
- ▶ free!!!
- ▶ jako dobro podržan, razvija se, rasprostranjen
- ▶ Google, Youtube, ...
- ▶ svaka distribucija GNU/Linux-a ga ima

Python???

- ▶ Guido van Rossum, December 1989
- ▶ masovno se uči kao prvi programski jezik: MIT, CU Boulder, ...
- ▶ radi pod raznovrsnim platformama, sve koje se kod nas sreću obuhvaćene
- ▶ vrlo objektno orijentisan, mada ne mora da se koristi
- ▶ vrlo moći tipovi podataka
- ▶ lako se prave novi tipovi podataka

Python, kako nabaviti? GNU/Linux

GNU/Linux:

- ▶ već ima interpreter, sigurno
- ▶ provera: komandna linija, `python3` nekad bilo `python`
`Python 3.8.5 (default, Jul 28 2020, 12:59:40)
[GCC 9.3.0] on linux`
Type "help", "copyright", "credits" or "license" for more information.
- ▶ nešto valja dovući iz repository (za Python 3!):
 - ▶ IDLE
 - ▶ IPython
 - ▶ numpy
 - ▶ scipy
 - ▶ matplotlib
 - ▶ pylab (sve prethodno)
 - ▶ python-serial
 - ▶ Sympy
 - ▶ Spyder
 - ▶ ...

Python, 2 ili 3? 3!

- ▶ rešeno, verzija 2 više „nije podržana“
- ▶ forking, 3 je „nov“ jezik
- ▶ verzija 3 nema backward compatibility
- ▶ nisu prevelične razlike (print, input, range, za početak)
- ▶ problem sa već napisanim programima
- ▶ problem ako se oslanjate na već postojeće programe
- ▶ koristim numpy, matplotlib, ... pylab
- ▶ bilo neočekivano brzo prebačeno
- ▶ verzija 3 je aktuelna, nju predajem
- ▶ `python3`

`Python 3.8.5 (default, Jul 28 2020, 12:59:40)
[GCC 9.3.0] on linux
Type "help", "copyright", "credits" or "license" for more information.`

Python, kako nabaviti? win

Windows:

- ▶ <http://python.org/>
- ▶ dovucete, instalirate
- ▶ za win je IDLE included
- ▶ ostalo?
 - ▶ ili <https://pypi.org/project/pip/>
 - ▶ ili <https://www.anaconda.com/products/individual>
 - ▶ ipython+numpy+scipy+matplotlib+R+...
 - ▶ pySerial, SourceForge,

- ▶ <http://ocw.mit.edu/>, Python kursevi, ima više
- ▶ isto, edX
- ▶ <https://openbookproject.net/thinkcs/python/english3e/>
- ▶ <https://greenteapress.com/wp/think-python-2e/>
- ▶ još mnogo free resursa, realno je samo #1 potrebno
- ▶ izbor ostalog izlistan na sajtu predmeta

Python, počinjemo, kalkulator

Pokrenete IDLE ili ipython, kako god znate (kom. lin., dash, ...)

osnovne operacije:

```
2+2
2-3
2*3
```

```
10//3
10.0//3.0
10.0//3.0
-10.0//3.0
-10//3
```

od verzije 3 nema iznenađenja:

```
3/4*100
3.0/4.0*100.0
3.0/4*100
3./4*100
```

Python, mislili ste da je sa deljenjem gotovo?

Python, type i celobrojno deljenje

```
help(type)
type
type(3)
type(3.0)
type(3.)
type(10//3)
type(10.0//3)
type(10/3.)
type(10./3.)
```

```
2^3
3^2
3^3
10^10
2**3
2 ** 3
3 ** 2
10 ** 10
type(10**10)
3**64
type(3**3)
type(3**64)
```

Python, stepenovanje

Python, ostatak pri deljenju

```

print(s)
print(m)
print(s, m)
print('proteklo je', s, 'sat i', m, 'minuta')
```

Python, operatori poređenja

```
2 == 2
2==2
3 == 2
2 != 3
2 != 2
#2 <> 2
#2 <> 3
