

Elementi elektronike – FEBRUAR 2018 – REŠENJA

3.

DC analiza:

$$V_t = V_{D2} + V_{R2} = V_{D2} + R_2 I_{R2}$$

$$I_G = I_{D1} + I_{R1} = \frac{V_x - V_{D1}}{R_3} + \frac{V_x - V_{D2}}{R_1 + R_2}$$

$$V_x = I_G \frac{R_3(R_1 + R_2)}{R_1 + R_2 + R_3} + V_D$$

$$I_{R1} = I_{R2} = \frac{V_x - V_{D2}}{R_1 + R_2} = 5 \text{ mA}$$

$$V_t = V_{D2} + V_{R2} = V_{D2} + R_2 I_{R2} = 0.8 \text{ V}$$

AC analiza:

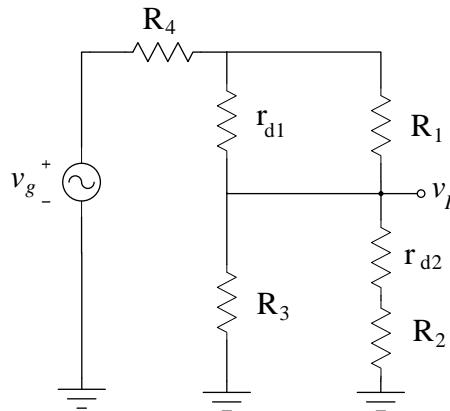

$$r_{d1} = \frac{V_t}{I_{D1}} = 5 \Omega$$

$$r_{d2} = \frac{V_t}{I_{D2}} = 5 \Omega$$

$$V_i = \frac{\frac{R_3(R_2 + r_{d2})}{R_3 + R_2 + r_{d2}}}{\frac{R_3(R_2 + r_{d2})}{R_3 + R_2 + r_{d2}} + \frac{R_1 \cdot r_{d1}}{R_1 + r_{d1}} + R_4} V_g = 26.772 \text{ mV}$$

$$v_i = V_i \sin(\omega t)$$

Ukupni signal je jednak $v_I = V_t + v_i$.

4.

Tranzistor M_3 je sa ugrađenim kanalom, tako da provodi i pri $v_{GS3} = 0$. Pod pretpostavkom da tranzistor M_3 radi u režimu zasićenja važi

$$I_{D3} = \frac{k_n}{2} (V_{GS3} - V_{t3})^2 = \frac{k_n}{2} V_t^2 = 500 \mu\text{A}.$$

Na osnovu slike se može pisati

$$V_{GS1} + V_{GS2} = V_{DD},$$

iz čega sledi

$$V_t + \sqrt{\frac{2I_{D1}}{k_n}} + V_t + \sqrt{\frac{2I_{D2}}{k_n}} = V_{DD}.$$

Na osnovu slike se vidi da važi

$$I_{D2} = I_{D1} + I_{D3},$$

Na osnovu čega se prethodni izraz transformiše u

$$V_t + \sqrt{\frac{2I_{D1}}{k_n}} + V_t + \sqrt{\frac{2(I_{D1} + I_{D3})}{k_n}} = V_{DD}.$$

Rešavanjem prethodne jednačine dobija se

$$I_{D1} = \frac{k_n}{8} \left(\frac{V_t^2 - (V_{DD} - 2V_t)^2}{V_{DD} - 2V_t} \right)^2 = \frac{8}{9} \text{ mA},$$

$$V_{D1} = V_{GS1} = V_t + \sqrt{\frac{2I_{D1}}{k_n}} = \frac{7}{3} \text{ V},$$

$$I_{D2} = \frac{k_n}{2} (V_{DD} - V_{D1} - V_t)^2 = \frac{25}{18} \text{ mA}.$$

S obzirom da su ispunjeni uslovi

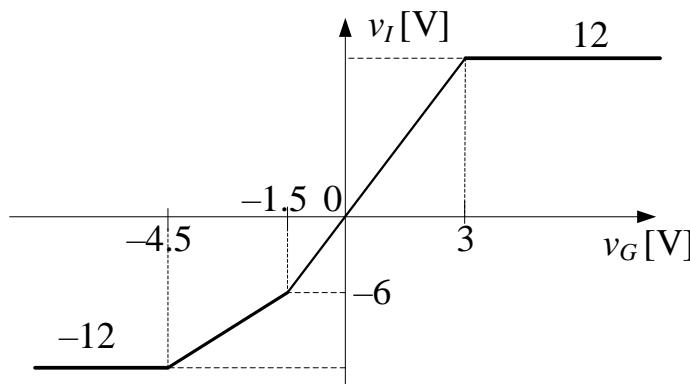

$$V_{DS3} \geq V_{GS3} - V_{t3},$$

$$V_{D1} \geq V_t,$$

tranzistor M₃ zaista provodi u režimu zasićenja. Ovu proveru nije potrebno raditi za preostala dva tranzistora jer su kod njih gejt i drejn kratko spojeni, tako da uvek rade u zasićenju ($V_{GD} = 0 < V_t$).

7.

$$v_I = \begin{cases} -12 \text{ V} & v_G < -4.5 \text{ V} & \text{OP neg. zas.} \\ 2v_G - 3 \text{ V} & -4.5 \text{ V} \leq v_G < -1.5 \text{ V} & \text{D on} \\ 4v_G & -1.5 \text{ V} \leq v_G < 3 \text{ V} & \text{D off} \\ 12 \text{ V} & v_G \geq 3 \text{ V} & \text{OP poz. zas.} \end{cases}$$
