

Elementi elektronike – JUL 2016 - REŠENJA

3.

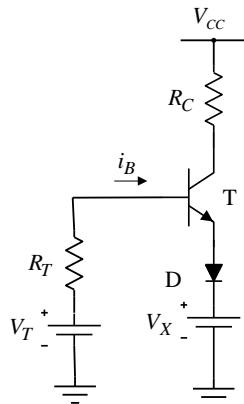

Na početku je tranzistor zakočen sve dok je

$$v_{R1} = \frac{R_1}{R_1 + R_2} V_{CC} < V_X + V_D + V_{BE} = 3.3V .$$

Kako je tranzistor zakočen, to je $i_B = i_C = 0$.

Tranzistor provede u aktivnom režimu za $V_{CC} = 4.95V$. Zamenom dela šeme tevenenovim generatorom

$$V_T = \frac{R_1}{R_1 + R_2} V_{CC} = \frac{2V_{CC}}{3} \text{ i } R_T = R_1 \parallel R_2 = \frac{2}{3} k\Omega \text{ kao na slici, računa se:}$$

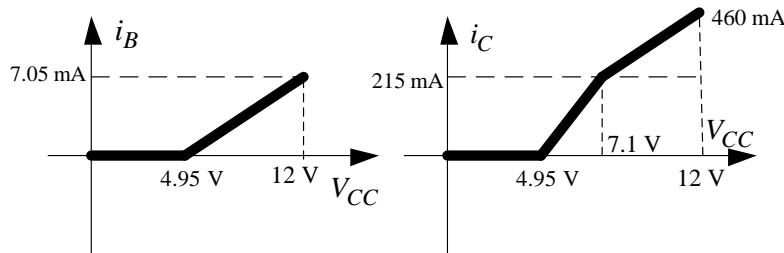

$$i_B = \frac{V_T - V_{BE} - V_D - V_X}{R_T} = \frac{V_{CC}}{1k\Omega} - 4.95 mA ,$$

$$i_C = \frac{V_{CC}}{10\Omega} - 495 mA ,$$

$$v_{CE} = V_{CC} - R_C \beta i_B - V_D - V_X = -V_{CC} + 7.3V .$$

Tranzistor ulazi u zasićenje kada je $V_{CC} = 7.1V$. Nadalje važi ista zavisnost struje baze kao u aktivnom režimu. Struja kolektora je jednaka

$$i_C = \frac{V_{CC} - V_{CES} - V_D - V_X}{R_C} = \frac{V_{CC}}{20\Omega} - 0.14A .$$

4.

a) $V_s = 5.58V$

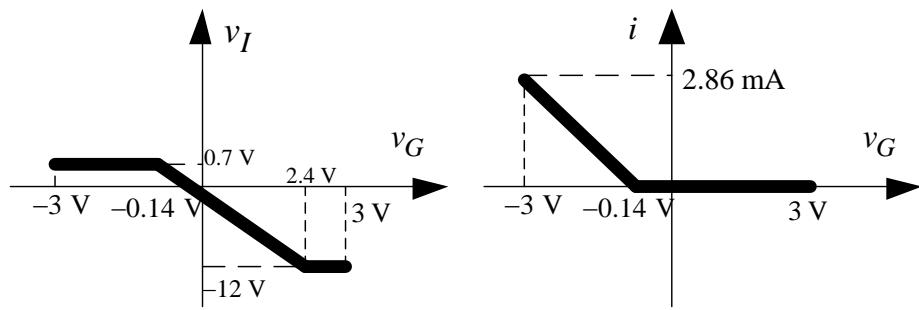

b) $A_v = \frac{g_m R_p}{1 + g_m R_p}$, $R_u = R_{G1} \parallel R_{G2}$, $R_i = \frac{R_p}{1 + g_m R_p}$

c) $A_v = 0.98$, $R_u = 26.7 k\Omega$, $R_i = 69 \Omega$

6.

$$v_I = \begin{cases} V_{BE} = 0.7V & -3V \leq v_G < -0.14V \\ -\frac{R_2}{R_1} v_G = -5v_G & -0.14V \leq v_G < 2.4V \\ -12V & 2.4V \leq v_G < 3V \end{cases} \quad \text{T on} \quad \text{T off} \quad \text{OP negativno zasićenje}$$

$$i = \begin{cases} -\frac{v_G}{R_1} - 0.14mA & -3V \leq v_G < -0.14V \\ 0 & -0.14V \leq v_G < 3V \end{cases} \quad \text{T on} \quad \text{T off}$$

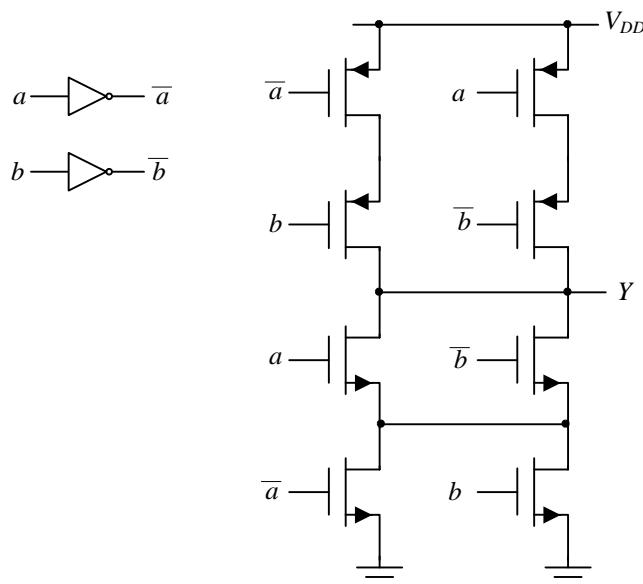

:

$$a) \quad Y = \overline{(A+B)(C+D)}$$

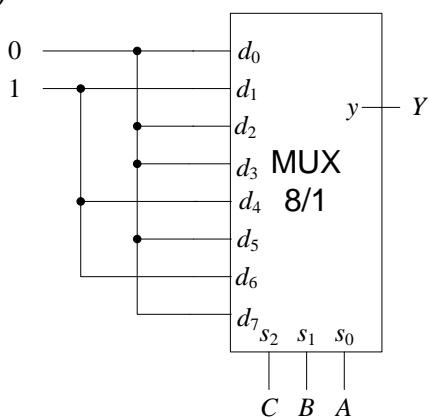

$$b) \quad Y = a \oplus b = a\bar{b} + \bar{a}b = \overline{\overline{a}\overline{b} + \overline{a}b} = \overline{\overline{a}\overline{b}} \cdot \overline{\overline{a}b} = (\overline{a+b}) \cdot (\overline{a+b}) = \overline{(A+B)(C+D)}$$

Uporedjivanjem se određuje
 $A = \bar{a}, B = b, C = a, D = \bar{b}$

8.

a)

b)
